RICARDO CASTANEDA

SENIOR SDET

PROFESSIONAL SUMMARY

Senior SDET with 10+ years in test automation and software development. Skilled in automation frameworks, E2E testing, API testing, and shift-left engineering. Experienced in QA automation using Playwright, Cypress, TestCafe, Selenium, PyTest, TypeScript, JavaScript, and Java. Proficient in CI/CD integration with Azure DevOps, Jenkins, and Docker, with a solid engineering background including 3+ years in Java development and over a year in BPM development.

EDUCATION

Computer Science Engineering

Universidad Don Bosco (UDB) (2014 - 2021)

PROFESSIONAL EXPERIENCE

Senior QA Automation @ WillDom

March 2026 – Present

- Quality Leadership: Owned feature quality from inception to production as acting QA lead, covering Stripe payments and native iOS testing.
- AI-Driven Test Engineering: Built OpenAI Codex skills and multi-agent workflows to automate test migration, identify coverage gaps, and generate actionable test scenarios.
- Test Automation Modernization: Migrated two E2E repositories from Cypress to Playwright, improving CI stability and leveraging self-healing agents and BrowserStack for scalable cross-browser and cross-device coverage.

Senior QA Automation @ Lumenalta (formerly Clevertech)

May 2023 – November 2025

- Developed a comprehensive E2E automation framework with Cypress/Typescript, custom data generation, component testing, and detailed reporting.
- Created a containerized CI/CD workflow in Azure DevOps using Docker, enabling parallel execution and automated deployment for reliable pipelines.
- Enhanced coverage and stability through test development, pipeline failure analysis, defect triaging, and ongoing improvements in test reliability.

Senior QA Automation @ Avenue Code
March 2022 – February 2023

- Developed E2E/API automation scenarios in Testcafe/Playwright with JavasScript/TypeScript and maintained existing suites running in Jenkins pipelines.
- Provided QA support across multiple teams, ensuring feature quality through bug reporting and triage.
- Reviewed and improved Pull Requests, including optimizing existing GitHub Actions workflows to enhance automation reliability and efficiency.

Mid QA automation @ Encora (formerly Avantica)
November 2019 – March 2022

- Led QA release responsibilities, including bi-weekly production deployments, test planning, defect triage/validation, TeamCity pipeline monitoring, and continuous support to multiple engineering teams.
- Developed and maintained UI and API automation (JavaScript/TestCafe, Python/PyTest) with a strong focus on scalability, and was in charge of reviewing pull requests to ensure adherence to test design patterns and QA best practices.
- Managing test assets in TestRail, while supporting infrastructure powered by Docker, Kubernetes, RabbitMQ, JIRA, Datadog, and Splunk.

QA automation @ Rulesware LLC
August 2015 – July 2018

- Developed and maintained automation tests written in Java using Selenium WebDriver, TestNG, data-driven scripts (Excel, data providers), and Page Object Models.
- Built reusable utilities to consume, parse, and validate RESTful API endpoints, improving backend test coverage and framework capabilities.

LANGUAGE

- English (Fluent)
- Spanish (Native)
- French (B1)

CORE COMPETENCIES

- Building automation frameworks from scratch (E2E, API, UI, Performance)
- Designing scalable test architectures (POM, Dependency Injection, Factory Pattern, data generation utilities)
- Implementing advanced automation integrations (plugins, mocks, stubs, intercepts)
- Pipeline integration, containerization of test execution and parallelization
- Advanced debugging, triage, and root-cause analysis
- Working closely with developers, DevOps, product, and QA teams
- Leading automation initiatives and coaching peers.

TECHNICAL SKILLS

- Languages: Javascript/Typescript, Java, Python
- Frameworks: Cypress, Playwright, Selenium, Testcafe, PyTest.
